DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claim 1 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over Claim 1 of copending Application No.'s 09/703,335, 09/703,340, and 09/703,334. Although the conflicting claims are not identical, they are not patentably distinct from each other because discloses a time cell, which experiences a transition of states after a programming (charging) operation, detections means for detecting a value within a charge storage element, which is located within the time cell. An explicit obviousness statement is not necessary when the Claims are worded almost identically to one another.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

1. Claims 1-50 contain allowable subject matter. Applicant's arguments provided in the Appeal Brief (Paper No. 14) overcome the Examiner's previous rejections. However, the Double Patenting rejections are still enforced pending a submission of a Terminal Disclaimer.

Prior Art

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Ishibashi U.S. Patent No. 5,374,904 discloses a phase-locked loop circuit having adjustable reference clock signal frequency and filter capacitance compensation.
- Ma U.S. Patent No. 6,067,244 discloses a ferroelectric dynamic random access memory, wherein an FE transistor replaces a capacitor.
- Begin U.S. Patent No. 4,995,019 discloses a time period measuring apparatus wherein time measure is achieved by utilizing a time variable interpose, which comprises components that correspond to an RC circuit.
- Curtis U.S. Patent No. 5,195,061 discloses a practice timer for measuring elapsed time during an activity comprising a variable time constant RC circuit.
- Takeda U.S. Patent No. Re. 35,043 discloses a self-charging electronic timepiece comprising a time constant RC circuit.
